

Table 1

Distribution of studies by social bonding category, neuroimaging modality, and task category.

<u>Category</u>	<u>Description</u>	<u><i>n</i></u>
<u>Bonding Type</u>		
<u>Family</u>	<u>Parent-child (mother/father), grandparent-child</u>	<u>30</u>
<u>Friends</u>	<u>Friends, social closeness, social networks</u>	<u>25</u>
<u>Identities</u>	<u>Shared identity, political partisanship, in-group</u>	<u>22</u>
<u>Romantic</u>	<u>Couples, spouses, potential romantic partners</u>	<u>20</u>
<u>Teacher-Student</u>	<u>Teacher-student instructional dyads</u>	<u>12</u>
<u>Comparative</u>	<u>Studies comparing multiple bonding types (e.g., friends vs. romantic)</u>	<u>43</u>
<u>Modality</u>		
<u>fNIRS</u>	<u>Functional Near-Infrared Spectroscopy</u>	<u>50</u>
<u>EEG</u>	<u>Electroencephalography</u>	<u>25</u>
<u>fMRI</u>	<u>Functional Magnetic Resonance Imaging</u>	<u>24</u>
<u>MEG</u>	<u>Magnetoencephalography-based hyperscanning</u>	<u>1</u>
<u>Multimodal</u>	<u>Integrated measures (e.g., fNIRS + Physio)</u>	<u>4</u>
<u>Task Context</u>		
<u>Resting</u>	<u>Resting-state or passive conditions without explicit task demands or social interaction</u>	<u>15</u>
<u>Shared Narrative</u>	<u>Shared exposure to temporally structured stimuli, including videos, movies, narratives, speeches, or passive music listening</u>	<u>41</u>
<u>Cooperative</u>	<u>Tasks requiring explicit coordination or shared goals, such as cooperative games or joint decision-making</u>	<u>28</u>
<u>Naturalistic</u>	<u>Spontaneous or semi-structured social interaction, including free play or natural conversation</u>	<u>24</u>
<u>Instructional</u>	<u>Teaching–learning contexts characterized by asymmetric instructional roles</u>	<u>10</u>
